 Salt Cedar is an invasive plant in the bosque. It was brought from Eurasia to New Mexico to decorate yards and to strengthen the levees. Now they are choking out the cottonwood trees.

 Fire makes salt cedar stronger. After the burn, the roots are alive and it grows back quickly.

 Tamarisk beetles were recently brought in from Eurasia to kill salt cedar.

# Cedro Salino o Tamarisco

 El Cedro Salino es una planta invasiva en el bosque. Fue traída de Eurasia a Nuevo Mexico para decorar las yardas y para fortalecer los diques. Ahora están desplazando a los alamos.

 Los incendios fortalecen el cedro salino. Después de un incendio, las raíces todavía están vivas y el árbol retoña rápidamente.

 Los escarabajos tamariscos se trajeron de Eurasia para matar al cedro salino.
