a - These arsenic values were effective December 31, 2008. Until then, the MCL was 50 PPB. See Health Effects Language at abcwua.org.

b - Represents the USEPA Secondary Contaminant Level (SMCL). Secondary Drinking Water Standards are unenforceable federal guidelines regarding taste, odor, color and certain other non-aesthetic effects of drinking water. EPA recommends them as reasonable goals, but federal law does not require water systems to comply with them.

c - EPA considers 50 picoCuries/Liter to be the level of concern for beta particles.
